

Rocky Flats Citizens Advisory Board Recommendation 2000-6

to the U.S. Department of Energy

Sponsorship of Public Workshops Related to Development of Radionuclide Soil Action Levels (RSALs) for Rocky Flats

Approved December 7, 2000

The Rocky Flats Citizens Advisory Board (RFCAB) recommends that the RFCA agencies provide for two public workshops related to the development of Radionuclide Soil Action Levels (RSALs) for the Rocky Flats site, to be conducted at least three months prior to formal public comment on the review. The first workshop should focus on parameter selection and the second on the RESRAD computer model. Not only are these topics highly technical in nature, but also their application is critical to the development of appropriate RSALs. Further clarification of these technical issues would foster public education and lead to more informed community involvement in the RSAL selection process for the site.

The Rocky Flats Citizens Advisory Board is a community advisory group that reviews and provides recommendations on cleanup plans for Rocky Flats, a former nuclear weapons plant outside of Denver, Colorado.
